

Are you looking for new insight into your biological or biomedical problem?

Mathematics in Medicine Study Groups (MMSG) are week long workshops where mathematical modellers tackle problems and questions proposed by life science researchers. The meetings have a strong track record of developing new collaborations at the life science mathematical modelling interface often leading to new insight into complex biological questions.

If you have a problem you would like to bring along to the next MMSG at the

University of Reading

5th -10th September 2011

please contact the organiser, Dr Marcus Tindall (m.tindall@reading.ac.uk), in the first instance.

Problem submissions will close on April 29th 2011.

Further details on the MMSG programme, previous workshops, problems tackled and follow-up activities can be found at www.maths-in-medicine.org

MMSGs are funded by
