

Are you looking for new insight into your biological or biomedical problem?

Mathematics in Medicine Study Groups (MMSGs) are week long workshops where mathematical modellers tackle problems and questions proposed by life sciences and medical researchers. The meetings have a strong track record of developing new collaborations at the life sciences and mathematical modelling interface, often leading to new insight into complex biological and biomedical questions.

If you have a problem you would like to bring along to the next MMSG at

Keele University
10th – 14th September 2012

please contact the organiser,

Dr Shailesh Narie
(e-mail: s.naire@maths.keele.ac.uk),

in the first instance.

Further details on the MMSG programme, previous workshops, problems tackled and follow-up activities can be found at

www.maths-in-medicine.org

MMSGs are funded by
